

NAMS v.6 User Guide & Disclaimer

Version: v.6-STABLE (April 26, 2026)

Developer: Cadet Pierce

Disclaimer & Licensing

BEFORE USE, YOU MUST READ THE LICENSE AND THE ENTIRE USER GUIDE. This project is dedicated to the Mission 22 Veteran Suicide prevention organization.

Telemetry & Privacy

- **Total Local Operation:** Everything in this software is entirely local. There is absolutely no communication between this software and an external server unless manually configured by the user for their specific purpose.
- **No Background Services:** There are no auto-updaters, background services, or network calls whatsoever.
- **Military Status:** The military does not endorse this software; it is used purely on a voluntary basis.

Primary Purpose

NAMS (Naval Asset Management Software) is primarily designed for JROTC or ROTC units to manage supply, inventory, armory, and other logistical requirements.

Frequently Asked Questions (FAQ)

Q: Do I have to install this program?

A: No. NAMS is a portable HTML file. Most schools and ChromeOS devices are strict about app installations, but every modern device supports HTML files. It works in the same sense as downloading a JPEG and opening it in your browser.

Q: Won't my school block it if it's like a website?

A: No, because the file is locally hosted on your computer. It does not require an internet connection to run.

Q: How do I open it every time I use it?

A: You can bookmark the HTML file while it is open in your browser, or simply keep the file in a dedicated folder on your computer for easy access.

Software Interface & Navigation

Note: The visual documentation in previous versions (ARIS v.4.2) is now outdated. NAMS v.6 introduces a modernized, high-contrast interface with expanded management tools.

1. Data Management (The Workspace)

The main area of the application allows you to search and view your inventory. You can toggle between two primary views:

- **Table View:** A dense, spreadsheet-style list showing ID, Category, Item Name, Size, Quantity, Status, and Notes.
- **Card View:** A visual grid where each item is represented as a "card," making it easier to read on tablets or touch devices.

2. Adding and Editing Items

The right-hand panel (or bottom on mobile) is your "Add/Edit" center. To create an entry:

1. **Select Category:** Choose an existing category or type a new one into the "Add new category" box and click "Add."
2. **Item Details:** Enter the Name and Size. If an item doesn't have a size (like pins), leave it blank.
3. **Status:** Choose between *In Stock* (Green), *Broken* (Red), or *In Use* (Yellow).
4. **Quantity:** Use the + or - buttons to adjust the count, or type the number in directly.

3. Profile Management (New in v.6)

NAMS v.6 now supports multiple **Profiles**. This allows you to maintain entirely separate databases (e.g., one for "Uniforms" and one for "Armory") within the same application. Use the Profile button (person icon) in the header to switch between or create new profiles.

4. Advanced Administration & Security

- **CMV (Cumulative Count):** Click the CMV button to see a pop-up window showing the total quantity of items across every category at a glance.
 - **PDF Export:** The printer icon allows you to generate a professional, printable report of your inventory.
 - **Settings (The Gear Icon):** Access accessibility options (font size/bold text), view the **Global Event Log**, or execute advanced developer commands.
 - **Clear All:** To reset the system, use the "Clear All" button. This requires the default password: administratormasterpassword.
-

Storage & Backups

Important: NAMS stores data in your browser's local cache. If you clear your browser cookies and cache, your data will be deleted.

The JSON Backup System

To prevent data loss, you **must** use the Export/Import system:

- **Export JSON:** Downloads a small file to your computer containing all your data. We recommend doing this after every session.
- **Import JSON:** Uploads your saved file back into the application to restore your inventory.

Recommendation
Rename your exported files with a date and topic (e.g., "Armory_BackUp_04-26-26.json") to keep track of your history.

User Guide compiled for NAMS v.6 Stable Release.
